Summary

I've spent 2+ years turning designs into fast, functional web and mobile apps using React, Next.js, and React Native. Most of my work lives on the frontend but I'm comfortable going full stack when needed. Lately I've been building AI-powered features integrating LLM and vision APIs into real products and it's changed how I think about building software.

Experience

Full Stack Developer (React.js | Next.js | Node.js | React Native)

Tekxai — Dec 2025 – Present

- **Scalable Frontend Development:** Architect and develop scalable web and mobile applications using React.js, Next.js, and React Native.
- **Performance Optimization:** Improved rendering performance and reduced load times through optimized component structure, memoization, and efficient data-fetching strategies.
- **Mentorship & Collaboration:** Guide and mentor junior engineers, providing code reviews, best practices, and workflow improvements.
- **AI-Driven Automation:** Leverage AI tools to automate repetitive tasks, improve code quality, and accelerate development.
- **Backend Development & APIs:** Developed REST APIs using Node.js and Express and integrated MongoDB/PostgreSQL databases to support scalable applications.

Full Stack Developer (React.js | Next.js | Node.js | React Native)

YODO — Nov 2023 – Dec 2025

- **UI Architecture Improvements:** Spearheaded UI architecture enhancements.
- **Responsive and Adaptive Design:** Shaped user interfaces with a focus on responsive design, delivering a consistent experience across diverse screen sizes.
- **State Management and API Integrations:** Managed complex applications states using Redux Toolkit, Zustand and Context API, seamlessly integrating RESTful APIs.
- **Component Development and Reusability:** Designed modular, reusable components in React and React Native for faster development and easier maintenance.
- **Collaboration and Version Control:** Collaborated with UI/UX designers to implement features and utilized git for version control to facilitate collaborative development and code review processes.
- **Backend Integration:** Worked closely with backend services, handling API design discussions and implementing secure authentication flows and data interactions with MongoDB-based services.
- **Static Site Generation and Optimization:** Leveraged Next.js for static site generation, enhancing load times and SEO.

Projects

Ask Charles | AI-Powered Image Q&A Platform

- **Image-Based Q&A:** Built a ChatGPT-inspired web application allowing users to upload images and ask questions focused on treasure identification (coins, artifacts, collectibles).
- **AI/ML Integration:** Integrated AI/ML APIs to analyze uploaded images and generate contextual, intelligent responses.
- **Access Control & Usage Limits:** Implemented question limits for anonymous users (1 free query) and authenticated users (2 additional queries).
- **Payments & Monetization:** Integrated **Stripe** to allow users to purchase additional evaluations securely.

HostSwitch | Property Management & Matching Platform

- **Property–Manager Matching:** Built a comprehensive platform connecting property owners with professional property managers using **advanced matching algorithms**.
- **Proposal System:** Implemented a proposal and comparison workflow enabling owners to review, evaluate, and select property managers efficiently.
- **Messaging & Payments:** Built real-time chat and integrated secure payment processing between platform users.

YourScore | Real-Time Credit Score App with Admin Panel

- **Credit Score Integration:** Integrated **Equifax Dashboard APIs** to securely fetch and display users’ credit history and credit scores, enabling users to track financial health in real-time.
- **Authentication & Security:** Implemented **2FA (Two-Factor Authentication)**, **Veriff-based identity verification** for secure user onboarding and protection and **social login** for secure access.
- **Admin Dashboard:** Dashboard for user and credit data management and added **real-time customer support chat** for user assistance with websockets.

ESA Helper | Smart ESA Management Platform

- **Multi-Role System:** Built a multi-role system for **parents, vendors, and admins** to automate ESA purchases, reimbursements, and curriculum generation all in one place.
- **Payments & Integrations:** Integrated **Stripe** for secure subscription payments, **Plaid** for financial verification, and **OCR** to auto-extract data from uploaded receipts and generate compliant curriculums.
- **Streamlined User Experience & Operations:** Enabled **parents** to track reimbursements, manage students, and submit curriculums; **vendors** to manage offerings; and **admins** to oversee compliance and user operations.

APC | Ad Playback & Scheduling Platform

- **Ad Management System:** Enabling users to create, schedule, and monitor ads for playback on devices.
- **Payment Validation:** Integrated Stripe and payment validation to confirm bookings before generating dynamic ad playlists.
- **Collaboration with developers:** Collaborated with backend and Python developers to design APIs for playlist creation and device communication.

Technical Skills

Frontend: JavaScript, TypeScript, React, Next.js, Tailwind CSS, SCSS, Shadcn, Tanstack Query, Redux Toolkit, Zustand, Websockets
Mobile: React Native, Expo, Cross-Platform Development
Backend: Node.js, Express.js, MongoDB, PostgreSQL, Mongoose, Drizzle
Tools: Git, GitHub, Postman, Swagger, Docker, Stripe, Mapbox, Socket.io, Vercel

Education

Government College University	2020-2024
<i>Bachelor’s in Computer Sciences</i>
